Case Description

A global company provides an extensive range of products, including food and beverages. They operate a worldwide delivery network, ensuring their diverse array of products reaches consumers around the world.

Challenge & Solutions

The company faced two challenges in their quest for a scanning device. One was the need for a data reading solution for efficient delivery tracking and expense management. The other was the necessity for compatibility with iPhones and specialized logistics management software.

The SL220 iOS Sled Scanner effortlessly transforms iOS devices into an enterprise-grade scanner and maintains excellent scanning performance even in low-light environments. This product not only met but also enhanced the company's supply chain strategy, thereby streamlining the company's logistics and tracking operations. In addition, leveraging extensive decoding experience, Unitech offers a comprehensive barcode decoding solution, ensuring compatibility with and support for a variety of customer software applications to meet the company's logistics needs.

Reasons to Choose Unitech SL220 iOS Sled Scanner

In this case, the client sought a solution to enhance their logistics management. Their drivers are responsible for loading boxes of goods and distributing products to various outlets. The Unitech SL220 iOS Sled Scanner was chosen for its excellence in transforming these iPhones into efficient, high-performance scanning tools. It stood out for its advanced barcode scanning capabilities and flawless integration with iOS devices, aligning perfectly with the client's requirement for a tool to assist in recording and tracking shipments, as well as calculating travel expenses during deliveries. Additionally, the Unitech SL220 provides decoding support to meet the company's needs.
